Brief Description

Diagnosis : Cerebral Palsy
Date of Joining in Adarsh : 09/06/2008

Cerebral Palsy is a symptom in other words, it is a neuro motor developmental disorder seen in children due to brain injury which takes place during intra-uterine foetal development (before birth), during birth procedure and during early childhood days (1-3 yrs). Cerebral Palsy (CP) is characterized by muscle tone imbalance, spasticity in legs and arms, inability to initiate bodily movements, lack of control in postural balance such as upright sitting, standing and walking. The exact cause of Cerebral Palsy is unknown, but one of the chief causative factors for Cerebral Palsy is noted as lack of oxygen to the brain. Some of the other contributing factors for this condition are premature birth of babies (7-8 months) and low birth weight (less than 2 Kgs)

The incidence is assessed to be 3 or 4 in 1000 live births and it is equally distributed in males and females. Cerebral Palsy usually associated with several medical problems mainly Epilepsy, Mental Retardation, Speech Impairment, Visual Impairment, dental carries etc. Each medical problem should be treated appropriately to make the child fit for rehabilitation.

Medical History

, a child affected by Cerebral Palsy, was an old student of Adarsh and she re-joined Adarsh in 2008. As mentioned above, she is a case of Cerebral Palsy. As she is a pure Cerebral Palsy case, her motor disability prevents her to walk properly. She walks with support and she talks very well also. Her intellectual abilities are also very good.

Training programme:

She is also being given Physiotherapy, Occupational therapy and other recreational therapies like music, dance, drawing, computer etc. She has been undergoing regular

physiotherapy and vocational training. In addition she attends academic training under NIOS system- C level, which is equivalent to 7th std.

Outcome

In 2000 when she joined Adarsh for the first time, her functional skills were very average. Due to some personal as well as technical problems they could not continue her training in Adarsh. Now, when she rejoined Adarsh, we cannot see any remarkable changes in her functional skills and because of her age. We don't think that Physiotherapy will have big effect on her. But she is found to be happy with her academic training.
